

# Window Solutions for Educational Buildings

# Introduction

Silent Gliss premiered the first quiet curtain system in the world in 1952. Today we are proud to be the world's leading company for internal window treatment solutions in the high-end segment.

In schools and public buildings where design but even more the persistence and functionality are key needs, we are the perfect partner, quality is the common denominator for our product range. Only materials that satisfy the highest requirements concerning durability, stability and precision are used. A five year guarantee is taken for granted.

Let us support you in creating the best possible surroundings for a successful learning and working environment, and be inspired by our range of internal window treatment systems.

# Visual and Functional

## Roller Blind Systems

### **Auditoriums, Offices, Classrooms, Libraries**

Of all window treatments, roller blinds are the simplest to operate. Their clean lines complement modern architecture and interior design perfectly.

From spring operated to very heavy duty roller blinds, manually operated or motorised, we have a solution to suit the most demanding locations.

## Maximum Light Exclusion

### Silent Gliss Dim-out Systems

#### **Lecture Theatres, Classrooms, Dark Rooms**

This product group is primarily used for offices, schools, laboratories, wherever maximum light exclusion is needed. Silent Gliss dim-out roller blinds are available in both motorised and manual versions.

The dim-out blinds with electric operation offer a wide range of operating methods including fixed switch and remote control. Systems may be operated individually.

Most dim-out fabrics are flame retardant.

# Heavy Duty – Versatile

## Curtain Track Systems

### Halls, Theatres, Auditoriums, Libraries

Silent Gliss Curtain tracks can be customised to fit the contour of any situation with complex and versatile bending possibilities and are purpose designed for maximum efficiency, especially when bent, and ensure smooth operation for a lifetime.

Silent Gliss curtain tracking systems range from light to heavy duty and can be operated manually or motorised.

Robust and durable

## Vertical Blind Systems

### Halls, Auditoriums, Offices, Classrooms, Libraries

Vertical blinds are the best choice for efficient, flexible light, glare and privacy management. Their contemporary style suits almost all environments.

Robust and durable vertical blinds are suitable for all square windows but also for speciality windows with curves and angles. The handling of the blind is effortless and comfortable. Electrically or crank operated vertical blind systems for contract applications.

# Flexible

## Venetian Blind Systems

### Offices, Classrooms, Study

Venetian blinds remain amongst the most flexible window treatments for light control. Silent Gliss offers standard operating methods, for both the tilting of the slats and the raising and lowering of the blind. A wide choice of colours are available.

## Fabrics

Silent Gliss has an extensive array of fabrics offered in our fabric collection. From transparent to dim-outs, these fabrics will add to any interior. As important as the hardware is, the selection of the right fabric to ensure a smooth and professionally working window treatment system is just as important.

The demand to create surroundings which provide a feeling of security and well being is elegantly met by the symbiosis of design fabrics and high technology.

Trevira CS materials minimise the risk of fire and is permanently “flame retardant”. This particular feature of Trevira CS is built into its molecular structure and cannot be removed. Thus the material does not need to be impregnated and it retains its protective function. They are extremely hardwearing and can tolerate all kinds of stresses they may undergo in usage and after repeated laundering.

Efficient, smooth, quiet operation

## Room Divider / Cubicle Tracks

### Medical Training Facilities, Sick rooms

Silent Gliss System 6650 safety device is especially designed for safety in high risk areas. These systems have numerous other applications including industrial separation and overhead tracking. They offer total flexibility at reasonable cost and can be curved or formatted to virtually any requirement. Long-lasting and maintenance free. High grade nylon and precision-engineered rust-free siliconized aluminium are used – still the most efficient combination in the world. Meant to be bent by design. Made-to-measure. 5 Year guarantee.

Silent Gliss have incorporated BioCote® into the manufacturing process of cubicle curtain track systems, a proven natural product that has excellent anti-microbial qualities, effective in protection against harmful bacteria including MRSA, E-Coli and Salmonella.
